01. Introduction

In this assignment we are supposed to create a web application to find location of waterfalls, wild life parks etc. of Sri Lanka. We are considering only sub waterfalls / parks etc. In the simplest case the user may do a name based search and the place will be displayed on the web app.

02. Software and Hardware requirements

Software requirements:

- Pmapper as the map server
- MySQL as the database
- Netbeans IDE
- PHP Codeigniter framework
- Twitter bootstrap UI framework
- Apache Server

Hardware requirements:

- Dual-core 1.2 GHz processor
- At least 500MB internal space

03.Final project screenshots
